The **okicmd** and **okithm** Packages

Taihei Oki

May 16, 2022

1 The **okicmd** Package

1.1 Options

Options can be passed as `\usepackage[option1,option2]{okicmd}`.

Option name	Default?	Description
loadams	✓	Load the **amsmath** and **amssymb** packages.
noloadams		Stop loading the **amsmath** and **amssymb** packages.
argminspace	✓	Make short spaces after "arg" in `\argmin` and `\argmax`.
noargminspace		Stop making short spaces after "arg" in `\argmin` and `\argmax`.

1.2 Letters

Input	Output	LaTeX equivalent
l	ℓ	\ell
\ell	l	l
\epsilon	ε	\varepsilon
\varepsilon	ϵ	\epsilon
\phi	φ	\varphi
\varphi	ϕ	\phi

1.3 Parentheses

Possible size options are `\normal`, `\big`, `\Big`, `\bigg`, and `\Bigg`. If no size option is passed, parentheses' size is adjusted automatically by `\left` and `\right`.

Input	Output	LaTeX (almost) equivalent
`\prn{\cdot}`	$(\cdot)$	`\left(\cdot\right)`
`\prn[\normal]{\cdot}`	$(\cdot)$	`(\cdot)`
`\prn[\big]{\cdot}`	$\big(\cdot\big)$	`\bigl(\cdot\bigr)`
`\prn[\Big]{\cdot}`	$\Big(\cdot\Big)$	`\Bigl(\cdot\Bigr)`
`\prn[\bigg]{\cdot}`	$\bigg(\cdot\bigg)$	`\biggl(\cdot\biggr)`
`\prn[\Bigg]{\cdot}`	$\Bigg(\cdot\Bigg)$	`\Biggl(\cdot\Biggr)`
`\curl{\cdot}`	$\{\cdot\}$	`\left\{\cdot\right\}`
`\sqbr{\cdot}`	$[\cdot]$	`\left[\cdot\right]`
`\agbr{\cdot}`	$\langle\cdot\rangle$	`\left\langle\cdot\right\rangle`
`\dbbr{\cdot}`	$[\![\cdot]\!]$	`\left\llbracket\cdot\right\rrbracket`
`\pipe{\cdot}`	$\lvert\cdot\rvert$	`\left|\cdot\right|`
`\dbpp{\cdot}`	$\|\cdot\|$	`\left|\cdot\right|`
`\floor{\cdot}`	$\lfloor\cdot\rfloor$	`\left\lfloor\cdot\might\rfloor`
`\ceil{\cdot}`	$\lceil\cdot\rceil$	`\left\lceil\cdot\right\rceil`
`\pprn{\cdot}`	$((\cdot))$	`\left(\left(\cdot\right)\right)`
`\ccurl{\cdot}`	$\{\{\cdot\}\}$	`\left\{\left\{\cdot\right\}\right\}`
`\ssqbr{\cdot}`	$[[\cdot]]$	`\left[\left[\cdot\right]\right]`
`\aagbr{\cdot}`	$\langle\langle\cdot\rangle\rangle$	`\left\langle\left\langle` `\cdot\right\rangle\right\rangle`

1.4 Logic

Input	Output	LaTeX equivalent
`\bigland`	$\bigwedge$	`\bigwedge`
`\biglor`	$\bigvee$	`\bigvee`
`a \defeq b`	$a := b$	`a \coloneqq b`
`a \eqdef b`	$b =: a$	`a \eqqcolon b`
`P \defiff Q`	$P \overset{\mathrm{def}}{\iff} Q$	`P \overset{\mathrm{def}}{\iff} Q`

1.5 Sets

Input	Output	LaTeX (almost) equivalent
`\set{a, b, c}`	$\{a, b, c\}$	`\left\{a, b, c\}`
`\set{a \in S}[a^2 = 1]`	$\{\,a \in S \mid a^2 = 1\,\}$	`\left\{a \in S\mathrel{}\middle|` `\mathrel{}a^2 = 1\right\}`
`\set*{a}[$a$ is odd]`	$\{\,a \mid a \text{ is odd}\,\}$	`\left\{a\mathrel{}\middle|` `\mathrel{}\text{$a$ is odd}\right\}`
`\card{X}`	$\lvert X \rvert$	`\left|X\right|`
`X \symdif Y`	$X \triangle Y$	`X \mathbin{\triangle} Y`
`\setN`	$\mathbb{N}$	`\mathbb{N}`
`\setZ`	$\mathbb{Z}$	`\mathbb{Z}`
`\setQ`	$\mathbb{Q}$	`\mathbb{Q}`
`\setR`	$\mathbb{R}$	`\mathbb{R}`
`\setC`	$\mathbb{C}$	`\mathbb{C}`
`\setH`	$\mathbb{H}$	`\mathbb{H}`
`\setF`	$\mathbb{F}$	`\mathbb{F}`
`\setK`	$\mathbb{K}$	`\mathbb{K}`
`\setZp`	$\mathbb{Z}_{\geq 0}$	`\mathbb{Z}_{\ge0}`
`\setQp`	$\mathbb{Q}_{\geq 0}$	`\mathbb{Q}_{\ge0}`
`\setRp`	$\mathbb{R}_{\geq 0}$	`\mathbb{R}_{\ge0}`
`\setNpp`	$\mathbb{N}_{>0}$	`\mathbb{N}_{>0}`
`\setZpp`	$\mathbb{Z}_{>0}$	`\mathbb{Z}_{>0}`
`\setQpp`	$\mathbb{Q}_{>0}$	`\mathbb{Q}_{>0}`
`\setRpp`	$\mathbb{R}_{>0}$	`\mathbb{R}_{>0}`

1.6 Maps

Input	Output	LaTeX (almost) equivalent
`\doms{X}{Y}`	$X \to Y$	`{X}\to{Y}`
`\funcdoms{f}{X}{Y}`	$f : X \to Y$	`{f}\vcentcolon{X}\to{Y}`
`\restr{f}{S}`	$f\rvert_S$	`\left.f\right|_{S}`
`\id_K`	id_K	`\operatorname{id}_K`
`\dom f`	$\mathrm{dom}\, f$	`\operatorname{dom} f`
`\cod f`	$\mathrm{cod}\, f$	`\operatorname{cod} f`
`\supp f`	$\mathrm{supp}\, f$	`\operatorname{supp} f`

1.7 Lattices

Input	Output	LaTeX equivalent
`x \meet y`	$x \wedge y$	`x \mathbin{\wedge} y`
`x \join y`	$x \vee y$	`x \mathbin{\vee} y`
`\bigmeet`	$\bigwedge$	`\bigwedge`
`\bigjoin`	$\bigvee$	`\bigvee`

1.8 Algebra

Input	Output	LaTeX (almost) equivalent
`\Hom(G)`	$\mathrm{Hom}(G)$	`\operatorname{Hom}(G)`
`\End R`	$\mathrm{End}\,R$	`\operatorname{End} R`
`\Aut_k K`	$\mathrm{Aut}_k K$	`\operatorname{Aut}_k K`
`\gen{a,b}`	$\langle a,b\rangle$	`\left\langle a,b\right\rangle`
`\gen{a,b}[ab = e]`	$\langle a,b \mid ab = e\rangle$	`\left\langle a,b\mathrel{}\middle|` `\mathrel{}ab = e\right\rangle`
`\abel{G}`	G_{ab}	`G_{\mathrm{ab}}`
`\comm{G}`	$[G,G]$	`\left[G, G\right]`
`\ord G`	$\mathrm{ord}\,G$	`\operatorname{ord} G`
`\sym_n`	$\mathfrak{S}_n$	`\mathfrak{S}_n`
`\sgn(\sigma)`	$\mathrm{sgn}(\sigma)$	`\operatorname{sgn}(\sigma)`
`\mult{R}`	$R^\times$	`R^{\times}`
`\M_{m,n}(R)`	$\mathrm{M}_{m,n}(R)$	`\operatorname{M}_{m,n}(R)`
`\GL_n(R)`	$\mathrm{GL}_n(R)$	`\operatorname{GL}_n(R)`
`\SL_n(R)`	$\mathrm{SL}_n(R)$	`\operatorname{SL}_n(R)`
`\O(n)`	$\mathrm{O}(n)$	`\operatorname{O}(n)`
`\SO(n)`	$\mathrm{SO}(n)$	`\operatorname{SO}(n)`
`\U(n)`	$\mathrm{U}(n)$	`\operatorname{U}(n)`
`\SU(n)`	$\mathrm{SU}(n)$	`\operatorname{SU}(n)`
`L \extends K`	$L\,/\,K$	`L \mathbin{/} K`
`\ch(K)`	$\mathrm{ch}(K)$	`\operatorname{ch}(K)`
`\GF(2)`	$\mathrm{GF}(2)$	`\operatorname{GF}(2)`

1.9 Number Theory

Input	Output	LaTeX (almost) equivalent
`\abs{x}`	$\lvert x\rvert$	`\left|x\right|`
`\intset{n}`	$[n]$	`\left[n\right]`
`a \coprime b`	$a \perp b$	`a \mathrel{\bot} b`
`a \divides b`	$a \mid b$	`a \mid b`
`a \ndivides b`	$a \nmid b$	`a \nmid b`

1.10 Linear Algebra

Input	Output	LaTeX (almost) equivalent
`\tr A`	$\operatorname{tr} A$	`\operatorname{tr} A`
`\rank A`	$\operatorname{rank} A$	`\operatorname{rank} A`
`\trank A`	$\operatorname{t-rank} A$	`\operatorname{t-rank} A`
`\Det A`	$\operatorname{Det} A$	`\operatorname{Det} A`
`\Pf A`	$\operatorname{Pf} A$	`\operatorname{Pf} A`
`\perm A`	$\operatorname{perm} A$	`\operatorname{perm} A`
`\Hf A`	$\operatorname{Hf} A$	`\operatorname{Hf} A`
`\diag(a_1,\dotsc,a_n)`	$\operatorname{diag}(a_1,\ldots,a_n)$	`\operatorname{diag} (a_1,\dotsc,a_n)`
`\blockdiag(A_1,\dotsc,A_n)`	$\operatorname{block-diag}(A_1,\ldots,A_n)$	`\operatorname{block-diag} (A_1,\dotsc,A_n)`
`\vectorize(A)`	$\operatorname{vec}(A)$	`\operatorname{vectorize}(A)`
`\Row(A)`	$\operatorname{Row}(A)$	`\operatorname{Row}(A)`
`\Col(A)`	$\operatorname{Col}(A)$	`\operatorname{Col}(A)`
`\trsp{A}`	$A^\top$	`A^\top`
`\adjo{A}`	A^*	`A^*`
`\onevec`	$\mathds{1}$	`\mathds{1}`
`\norm{x}`	$\|x\|$	`\left|x\right|`
`\inpr{x}{y}`	$\langle x, y\rangle$	`\left\langle{x},{y} \right\rangle`

1.11 Analysis

Input	Output	LaTeX (almost) equivalent
`\intoo{a,b}`	(a,b)	`\left(a,b\right)`
`\intoc{a,b}`	$(a,b]$	`\left(a,b\right]`
`\intco{a,b}`	$[a,b)$	`\left[a,b\right)`
`\intcc{a,b}`	$[a,b]$	`\left[a,b\right]`
`\e`	e	`\mathrm{e}`
`\d`	d	`\mathrm{d}`
`\dif{f}{x}`	$\frac{\mathrm{d}f}{\mathrm{d}x}$	`\frac{\mathrm{d} f}{\mathrm{d} x}`
`\pdif{f}{x}`	$\frac{\partial f}{\partial x}$	`\frac{\partial f}{\partial x}`
`\ddif{f}{x}`	$\dfrac{\mathrm{d}f}{\mathrm{d}x}$	`\dfrac{\mathrm{d} f}{\mathrm{d} x}`
`\dpdif{f}{x}`	$\dfrac{\partial f}{\partial x}$	`\dfrac{\partial f}{\partial x}`

1.12 Complex Analysis

Input	Output	LaTeX equivalent
`\i`	i	`\mathrm{i}`
`\Re z`	Re z	`\operatorname{Re} z`
`\Im z`	Im z	`\operatorname{Im} z`
`\Arg z`	Arg z	`\operatorname{Arg} z`
`\Log z`	Log z	`\operatorname{Log} z`
`\Sin z`	Sin z	`\operatorname{Sin} z`
`\Cos z`	Cos z	`\operatorname{Cos} z`
`\Tan z`	Tan z	`\operatorname{Tan} z`
`\Res_{z=0} f(z)`	$\operatorname{Res}_{z=0} f(z)$	`\operatorname*{Res}_{z=0} f(z)`

1.13 Computer Science, Optimization

Spaces after "arg" in `\argmin` and `\argmax` are omitted by passing the `noargminspace` option.

Input	Output	LaTeX equivalent
`\argmin_{x \in S} f(x)`	$\arg\min_{x \in S} f(x)$	`\operatorname*{arg~min}` `_{x \in S} f(x)`
`\argmax_{x \in S} f(x)`	$\arg\max_{x \in S} f(x)$	`\operatorname*{arg~max}` `_{x \in S} f(x)`
`\Order(n)`	$O(n)$	`\mathrm{O}(n)`
`\order(n)`	$o(n)$	`\mathrm{o}(n)`
`\poly(n)`	$\operatorname{poly}(n)$	`\operatorname{poly}(n)`
`\polylog(n)`	$\operatorname{polylog}(n)$	`\operatorname{polylog}(n)`

2 The **okithm** Package

2.1 Theorems

If the language is set to Japanese like by `\usepackage[main = japanese]{babel}`, okithm will translate all the environment titles (Theorem, Definition, etc.) into Japanese. You can disable theorems by giving the option `notheorem` to okicmd.

```
1 \begin{theorem}[Awesome theorem]
2   The square root $\sqrt{2}$ of two is irrational.
3 \end{theorem}
4
5 \begin{definition}[Coprime]
6   Integers $a$ and $b$ are said to be \emph{coprime} if their greatest common
    divisor is one.
7 \end{definition}
8
9 \begin{lemma}
10   If $a$ and $b$ are coprime, so are $a^2$ and $b^2$.
11 \end{lemma}
12
13 \begin{proposition}
14   If $\sqrt{2} = a/b$, then $a^2 = 2b^2$.
15 \end{proposition}
```

```
16
17  \begin{corollary}
18    If $\sqrt{2} = a/b$ with $a$ and $b$ being coprime, then $a$ is even.
19  \end{corollary}
20
21  \begin{example}
22    If $a = 2$ and $b = 1$, then $a$ is even but $\sqrt{2} \ne a/b$.
23  \end{example}
24
25  \begin{remark}
26    Note that $a$ and $b$ must be integers.
27  \end{remark}
28
29  \begin{proof}[of Awesome theorem]
30    Suppose to the contrary that $\sqrt{2} = a/b$ with coprime $a$ and $b$.
31    Then both $a$ and $b$ are even, which contradicts the assumption.
32  \end{proof}
```

Theorem 2.1 (Awesome theorem). *The square root $\sqrt{2}$ of two is irrational.*

Definition 2.2 (Coprime). Integers a and b are said to be *coprime* if their greatest common divisor is one.

Lemma 2.3. *If a and b are coprime, so are a^2 and b^2.*

Proposition 2.4. *If $\sqrt{2} = a/b$, then $a^2 = 2b^2$.*

Corollary 2.5. *If $\sqrt{2} = a/b$ with a and b being coprime, then a is even.*

Example 2.6. If $a = 2$ and $b = 1$, then a is even but $\sqrt{2} \neq a/b$. $\qquad\square$

Remark 2.7. Note that a and b must be integers.

Proof (of Awesome theorem). Suppose to the contrary that $\sqrt{2} = a/b$ with coprime a and b. Then both a and b are even, which contradicts the assumption. $\qquad\square$

2.2 Algorithms

You can disable algorithms by setting the option noalgorithm.

```
1  \begin{algorithmic}[1]
2    \Input{$n \in \setN$}
3    \Output{$n(n+1)/2$}
4    \State{$s \gets 0$}
5    \ForTo{$i = 1$}{$n$}
6    \State{$s \gets s + i$}
7    \EndFor
8    \State{\Return $s$}
9  \end{algorithmic}
```

Input : $n \in \mathbb{N}$
Output: $n(n+1)/2$
  1: $s \leftarrow 0$

2: **for** $i = 1$ **to** n **do**
3: $\quad s \leftarrow s + i$
4: **return** s

2.3 Optimization Problems

You can change `minimize`, `maximize` and `subject to` into `min`, `max` and `s.t.`, respectively, by setting the option `optstyle` = `short`.
